How to collect a urine sample from your dog:

Use a clean dry container such as a takeaway container and free catch a urine sample by directly placing under the urine out let. Label the container with your surname, pets name and address. Try to avoid collecting debris such as soil or hair, it will contaminate the sample. Please do not use containers that may have contained sugar at some point. This can also affect the sample.

How to collect urine from your cat:

We sell a non-absorbable litter complete with pipette and container that you simply place into your cats litter tray instead of the normal litter. Once your cat has urinated in here use the pipette to suck some urine up and place into the container and label with your pets name, surname and address.

OR:

Shred a plastic carrier bag into an empty litter tray. Once your cat has urinated transfer the urine into a clean dry pot such as a takeaway container.
